

Help future concussion patients by joining our ground-breaking research study with the EyeBOX[®] Concussion Assessment, right here at Prevea Health Concussion Clinic!

What is the purpose of this study?

This study is designed to collect eye tracking data in individuals who have experienced a concussion to help improve future diagnosis of concussion and assessment of symptoms after a concussion.

Am I eligible to participate?

You may be eligible to participate in this study if you are here for your first concussion evaluation. Your physician will ask you a few questions to make sure you are eligible for this study.

Why should I consider participating?

1. You'll be making a **major difference** for future concussion patients.
2. It takes very little time and is painless (and dare we say interesting and fun?!). Just come in for your normal visit and answer a few additional questions along with taking the EyeBOX concussion assessment. For 15 minutes of your time, **you'll be helping advance our understanding of concussion.**

Who is Oculogica?

Oculogica Inc. is an eye tracking-based, neuro-diagnostic company dedicated to providing objective, fast, affordable information to support brain health. The EyeBOX device helps physicians assess concussion by collecting and analyzing eye-movements while patients watch a fun 4-minute video.

Contact the Prevea Health staff at 920-272-3300 for more information about this exciting opportunity!
